

Kreis Tool & Mfg. Co. Quality Management System Overview

Notes:

- 1) The Kreis Tool & Mfg. Quality System is designed as a system of interrelated processes. All main activities in the company are defined as Quality System Processes (QSPs) are grouped into the following categories (refer to the diagram at the top)
 - Customer Requirements, Product Realization, Measurement Analysis and improvement, Management Responsibility, Resource Management, and Continual Improvement
 and are organized into a Plan-Do-Check-Act loop.
- 2) The sequence and interrelation between the six groups and individual QSP are illustrated in this diagram.
- 3) QSPs and their sub-processes are documented in the quality manual an associated operational procedures and work instructions.
- 4) Quality Manual Section 4.2 and the corresponding Operational Procedures, Quality System documentation, explain in more detail how quality system processes are defined and documented.
